The aim of the Leeds Beckett Repository is to provide open access to our research, as required by funder policies and permitted by publishers and copyright law.

The Leeds Beckett repository holds a wide range of publications, each of which has been checked for copyright and the relevant embargo period has been applied by the Research Services team.

We operate on a standard take-down policy. If you are the author or publisher of an output and you would like it removed from the repository, please [contact us](#) and we will investigate on a case-by-case basis.

Each thesis in the repository has been cleared where necessary by the author for third party copyright. If you would like a thesis to be removed from the repository or believe there is an issue with copyright, please contact us on [openaccess@leedsbeckett.ac.uk](mailto:openaccess@leedsbeckett.ac.uk) and we will investigate on a case-by-case basis.

# Applications of GPS in rugby union matches and training

**World Rugby Science Network Conference 2015**

# GPS is here to stay

Investment from  
football will likely  
lead to rapid  
advances in

- Validity and  
reliability of  
tracking
- Automation of  
analysis
- Live tracking  
applications

## TO THE MEMBERS OF FIFA

Circular no. 1494

Zurich, 8 July 2015

SG/sco/ovo

### **Approval of Electronic Performance and Tracking System (EPTS) devices**

Dear Sir or Madam,

Technology is advancing at a great pace in all aspects of our daily life, and of course, our beautiful game is not an exception. One example of this is the use of electronic devices aimed at monitoring, tracking and storing data about the performance of players on the field of play.

Requests have been made to The IFAB to permit players to wear such devices during matches. Although the permission to wear EPTS devices was given in principle by The IFAB, the final decision as to whether or not EPTS devices may be used lies with the respective association, league or competition (according to The IFAB Circular No. 1, sent to the member associations in May this year).

FIFA has put in place a process to control the use of these tools for its own final competitions. For instance, for the FIFA U-20 World Cup New Zealand 2015 and the FIFA Women's World Cup Canada 2015™, the teams were requested to send these electronic performance and tracking system devices

# Comparison GPS vs. automated camera systems

## GPS (e.g. GPSports, Catapult)

- Portable (matches and training)
- Use with youth and academy players
- Cost effective relative to camera systems

## Semi-automated camera systems (e.g. Prozone)

- Stadium dependent
- Often home match data only
- Expensive

## Absolute vs. subjective speed thresholds

“Individualisation of velocity bands increases the high-speed running attributed to slower players and decreases the high-speed running attributed to faster players.”

Gabbett (2015) JSCR

# Absolute vs. relative speed thresholds

# Normative data

# Professional rugby match GPS norms

Table 1 - Representative sample of data from professional rugby union match play

	Forwards	Backs
<b>Relative distance (m.min<sup>-1</sup>)</b>	69 ± 8	69 ± 9
<b>Maximum speed (m.s<sup>-1</sup>)</b>	7.6 ± 1.3	8.8 ± 1.1
<b>Low-speed distance (m.min<sup>-1</sup> &lt;4m.s<sup>-1</sup>)</b>	58 ± 7	56 ± 6
<b>High-speed distance (m.min<sup>-1</sup> &gt;4m.s<sup>-1</sup>)</b>	11 ± 5	14 ± 4
<b>Repeated high intensity efforts (RHIE)</b>	12 ± 8	6 ± 6

Data compiled from Tee et al., (2015) SAJSM and Jones et al., (2015) Eur J Sport Sci

\* Significant differences regularly found between players in different positions

# Professional rugby training GPS norms

Table 2 – Typical training variables during a 1 week micro-cycle for professional rugby union players

	Forwards	Backs
<b>Total distance (m)</b>	7800 ± 950	9600 ± 1200
<b>Low-speed distance (m &lt;4.4m.s<sup>-1</sup>)</b>	6950 ± 900	7900 ± 1300
<b>High-speed distance (m &gt;4.4m.s<sup>-1</sup>)</b>	850 ± 350	1550 ± 500
<b>Repeated high intensity efforts (RHIE)</b>	19 ± 8	15 ± 10

Data compiled from Bradley et al., (2015) Eur J Sport Sci

\* Significant differences regularly found between players in different positions

# Variability of physical performance and player match loads in professional rugby union

Shaun J. McLaren<sup>a</sup>, Matthew Weston<sup>a</sup>, Andrew Smith<sup>b,c</sup>, Rob Cramb<sup>d</sup>,  
Matthew D. Portas<sup>a,\*</sup>

## Forwards

	Within- player CV (%; ±90% CL)	Between- player CV (%; ±90% CL)
<b>Absolute physical performance</b>		
TD (m)	10.0; ±2.1	5.5; ±1.5
LSR (m)	8.7; ±1.9	2.2; ±5.3
HSR (m)	27.6; ±6.9	16.5; ±5.1
VHSR (m)	68; ±19	58; ±63
TI (n)	24.0; ±5.9	15; ±16
RHIE (n)	18.7; ±4.4	16; ±12

## Backs

	Within- player CV (%; ±90% CL)	Between- player CV (%; ±90% CL)
<b>Absolute physical performance</b>		
TD (m)	10.8; ±2.1	6.7; ±4.7
LSR (m)	10.1; ±2.0	6.1; ±4.4
HSR (m)	20.1; ±4.1	32; ±19
VHSR (m)	34.1; ±7.5	19; ±17
TI (n)	36.4; ±7.9	39; ±22
RHIE (n)	39.5; ±8.8	47; ±31

# Reasons for large variability

## Reliability of measurement

- At low-speeds ( $<4\text{m.s}^{-1}$ ) GPS units display adequate reliability ( $\text{CV} < 3.0\%$ )
- At high-speeds ( $>4\text{m.s}^{-1}$ ) data “interpreted with caution”  
( $\text{CV} 5 - 20\%$ , depending on model)
- Petersen et al. (2009) *Int. J Sports Physiol Perform* 4:3

## Game related factors

- Ambient conditions
- Opposition
- Match situation
- Contact

# Contact

**Increased contact leads to reduced total and high intensity running distance during game play –**

Johnston et al., (2014)  
JSCR

# Match applications - pacing

\* indicates significant difference between backs and forwards, # indicated significant different from all other match periods. T, S, M, L and VL indicate effect sizes trivial (<0.2), small (0.2-0.5), medium (0.5-0.8), large (0.8-1.2) and very large (>1.2) respectively.

# Match applications - pacing

\* indicates significant difference between backs and forwards, # indicates significant different from match period 2nd half Q4. T, S, M, L and VL indicate effect sizes trivial (<0.2), small (0.2-0.5), medium (0.5-0.8), large (0.8-1.2) and very large (>1.2) respectively.

# Match Applications – fatigue profile

Pacing profile	
Forwards	Backs
"Slow positive"	"Flat"

# Match Applications – effect of substitutes

# Match applications –

## Measuring exertion

- Determine fatigue and modify recovery protocols
- Determine metabolic power (kJ/kg)
- Estimate energy expenditure  
adequate energy replacement

## Determining physical demands at various standards of play

# Physical Demands of Competition

- Average Demands

- Work:rest ratio ~ 1:5
- ~100-120 m/min

- Worst Case Scenario

- Work:rest ratio ~3:1
- ~160 m/min
- Repeated-High-Intensity Effort Bouts

- Train for the average demands → under-prepared for the most demanding passages of play

# Maximum match demands

Table 2 - Maximum observed values for movement variables during match play and percentage difference from average match play values for five positional groups.

	Tight Forwards	Loose Forwards	Scrumhalves	Inside Backs	Outside Backs
Relative distance (m.min <sup>-1</sup> )	81 (15%)	86 (25%)	99 (23%)	86 (26%)	78 (17%)
Maximum speed (m.s <sup>-1</sup> )	9.9 (36%)	10.8 (35%)	9.2 (15%)	9.4 (18%)	11.3 (20%)
Walking distance (m.min <sup>-1</sup> )	45 (33%)	45 (47%)	41 (15%)	43 (17%)	41 (16%)
Jogging distance (m.min <sup>-1</sup> )	39 (35%)	33 (37%)	33 (31%)	28 (36%)	25 (41%)
Striding distance (m.min <sup>-1</sup> )	11 (59%)	20 (75%)	25 (53%)	14 (56%)	15 (71%)
Sprinting distance (m.min <sup>-1</sup> )	1.5 (198%)	4.8 (128%)	5.8 (85%)	9.1 (276%)	7.3 (87%)
Sprint frequency	1 every 10 minutes (246%)	1 every 4 minutes (175%)	1 every 4 minutes (69%)	1 every 3 minutes (213%)	1 every 4 minutes (73%)
Acceleration frequency	1 every 7 minutes (86%)	1 every 3 minutes (159%)	1 every 3 minutes (41%)	1 every 2 minutes (185%)	1 every 3 minutes (63%)

# Diversity of Physical Requirements

There is a diversity of skills and positional requirements among rugby players

To ensure quality conditioning and recovery programs, it is essential to understand the physical demands placed on players in different positions

# Training for positional specificity
